

Agnes The Second

**AI Agent for
Supply Chain**

How Agnes reasons

From fragmented procurement data to defensible sourcing actions — in three stages.

01

Ingest

61 companies, 357 ingredients, 40 suppliers, 8,127 orders. BOMs, supplier coverage, procurement history, market benchmarks.

02

Score

Four scoring frameworks × five weighted dimensions. Every claim ties to a database row.

03

Recommend

Evidence-backed actions with confidence scores, explicit caveats, and an anti-monopoly veto that refuses unsafe consolidation.

Architecture Diagram

Layer 1 - Analysis (what Agnes found)

Substitution Groups
"These 14 magnesium variants are interchangeable"
Raw discoveries: functionally similar ingredients, no suggested action.

Consolidation Opportunities "These companies buy the same ingredient from different suppliers"
Raw discoveries: duplicate supply chains for identical items.

Risks
"This ingredient has only one supplier"
Raw discoveries: supply chain vulnerabilities.

Scoring & Actionability Filter

Assessing impact, confidence, and generating prioritized actions. Not all discoveries become recommendations.

Layer 2 - Recommendations

(What Agnes says you should do)

Visualized a unified from the analyzed data

Rank	Description	Priority
1	Route all orders for ingredient X	High
2	Consolidation for ingredient Y	High
3	Standardize on Magnesium	Medium

Type	Comes From	Action
consolidation	consolidation opportunities	"Route all orders for ingredient X to supplier Y"
risk_mitigation	risks	"Qualify a second supplier for ingredient X"
substitution	substitution groups	"Standardize on Magnesium across all 14 variants"
cost_optimization	ingredient pricing	"Switch to cheaper supplier Y for ingredient X"

Consolidation Explained

5-dimension scoring:
Benefit
Evidence
Compliance
Diversification
Feasibility

ANALYSIS tells you what's happening in your supply chain.

RECOMMENDATIONS tell you what to do about it — scored, ranked, and backed by evidence

Substitution Explained (5-dimension scoring applied)

Why trust her

Agnes is built to be defensible.
Not just impressive.

Deterministic math

Every number maps to a database row. No LLM guessing. Same data, same recommendation, every time.

Evidence trail

Every recommendation cites procurement history, supplier ratings, and benchmarks. Verifiable before approval.

5-dimension score

Weighted across leverage, compliance fit, switching feasibility, diversification, and evidence. Weights are published.

Anti-monopoly veto

Refuses consolidations that collapse supplier resilience — even when cost-optimal.

O U R T A K E

The value isn't cheaper sourcing.
It's trustworthy sourcing.
